

# BIONEST

Solutions Inspired by Nature™

Pristine Environment, Sophisticated Infrastructure,  
Luxury Accommodations and Eco-Friendly Design:  
This Calls for Wastewater Treatment by BIONEST™

## It's like having your cake and eating it too!

Bionest offers developers and property owners superior purification performance at a competitive price, low cost operation and maintenance AND a real payback when the treated water is reused.

"It would be a travesty to build such an enticing development in such captivating surroundings with no thought to preserving them".

-Wymara Beach Front Condos in Turks and Caicos-

Bionest applauds and supports the efforts of organisations such as Blue Flag to preserve beaches and marinas, Green Globe for sustainable development in tourist venues and Five Diamond Award Program for exceptional hotel and resort management including its Green Programs.

While taking into consideration its performance and cost efficiencies, the BIONEST™ system has another outstanding quality: IT IS SIMPLE — simple to install, simple to operate, simple to maintain.

The BIONEST™ system has been successfully tested and certified by NSF in the United States, in Canada by the BNQ (Quebec) and its performances verified by ETV Canada; it has also been granted the CE mark, which allows the BIONEST™ System to be installed throughout Europe.

Bionest's first project in the Turks and Caicos Islands involved retrofitting the original activated sludge system installed at the Yacht Club at Turtle Cove in Providenciales. In 2004 the Yacht Club system was retrofitted with a Bionest system, and since that time local engineers, architects and developers who have seen the quality of the water leaving the system have opted for the Bionest system above all others. In the last 3 years 5 new condo projects have BIONEST™ system presently installed. There are another 10 projects being considered in Providenciales. The Company is currently finalising the design of the BIONEST™ system for a project in South Caicos, to address the needs of the first 500 units of a 1,000-unit condo/resort project. There the re-use of the disinfected treated and recycled water will be split approximately 40% to be reused for the toilets, 10% to the commercial laundry and the remaining 50% for landscaping.

### Strategic Environmental Technologies
